$L_{ms}$  = magnetisatie-inductantie van de statorwikkelingen gekoppeld met de rotor

$L_{ls}$  = lekinductantie van de statorwindingen

$(N_r/N_s) \cdot L_{ms}$  = de amplitude van de wederzijdse inductanties tussen stator en rotorwikkelingen

Het produkt  $(N_r/N_s) [i_{abc,r}]$  vormt de driefasige rotorstroom betrokken op de stator (het is de driefasige statorstroom die correspondeert met de werkelijke driefasige rotorstroom die in de rotorwikkelingen stroomt).

De driefasige rotorstroom betrokken op de stator duiden we aan met  $[i'_{abc,r}]$ .
